New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutation responsible for genetic disorders or other traits and to assess biodiversity.

Claim 1; SEQ ID NO 15295; 103pp; English.

sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed in diagnostics as expressed sequence tags for identifying expressed care in diagnostics as expressed sequence tags for identifying expressed cartivity of (II) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a useful for generating at molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. Ab564197-Ab54564 represent novel human diagnostic coding sequences. Ab564197-Ab54564 represent novel human diagnostic coding sequences. Ab564197-Ab564564 represent novel human diagnostic coding sequences. Ab564197-Ab694564 represent novel human diagnostic parent did not appear in the printed specification, but was obtained in electronic format directly from MIPO at the invention of the printed specification, but was obtained in the printed specification. invention relates to isolated polynucleotide (I) and polypeptide (II)

Sequence 2760 BP; 486 A; 840 C; 810 G; 624 T; 0 U; 0 Other;

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

NIK is a serine/threonine protein-kinase, resembling several MAP

Kinase kinase kinase (MAPSK), that binds specifically to TRAF2, an
adapter proteins associated, either directly or through interaction

with other adapter proteins, with several receptors of the TNF/NGF

family. NIK overexpression in cells activates the transcription

factor NF kappa B. Cellular expression of kinase-deficient

NIK-mutants blocks NF kappa B induction by TNF, by either of the

two TNF receptors, by CD95 (Fas/Apo-1) and by TRADD, RIP and

MORTI/FADD, adapter proteins that bind to these receptors. It also

blocks NF kappa B induction by IL-1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  H.sapiens mRNA for serine/threonine protein kinase, NIK. Subramanian, A., Sydney, K., Tang, L., Vassiliev, H., Vo, A., Wagner, A., Wang, B., Wheeler, J., Wu, Y., Ye, W.J., Zhao, J. and Zody, M. Direct Submission
Submitted (28-MAR-1998) Whitehead Institute/MIT Center for Genome Research, 320 Charles Street, Cambridge, MA 02141, USA ON MAT 28, 1998 this sequence version replaced gi:2978476.
All repeats were identified using RepeatMasker: Smit, A.F.A. & Green, P. (1996-1997)
                                                                                                                                                                                                                                                 Only the last 48 kilobases of this clone are being submitted. The remainder overlaps accession number AC003070 (WICGR project L266). Location/Qualifiers
